 github.com/mikigit97
 [linkedin/mickael-zeitoun](https://www.linkedin.com/in/mickael-zeitoun)

TECHNICAL SKILLS

Programming

Python, Java, C#, SQL, JavaScript, R

Software & Data

Linux, Git, SQL / SQLite, REST & HTTP APIs, multithreading & concurrency, sockets (TCP/UDP), object-oriented design, CLI tools, unit testing, Docker, database indexing & query optimization, Slurm / cluster workflows

Machine Learning

Python, PyTorch, Hugging Face Transformers, LLMs & LoRA fine-tuning, scikit-learn, time-series modeling, feature engineering

Tools

Git, VS Code, Visual Studio, Jupyter, Docker, Slurm, Streamlit, Wireshark/tshark

LANGUAGES

English: Fluent

Hebrew: Fluent

French: Native

EDUCATION

M.Sc. Data Science

Ben-Gurion University
Meitar Excellence Program
Graduated

B.Sc. Data Engineering

Ben-Gurion University
Completed
Data Structures (97), Computational Models (99)

PROFESSIONAL SUMMARY

Data Engineering and Data Science M.Sc. graduate who builds and ships software. Comfortable across general-purpose languages like Python, Java, and C#, with hands-on experience in data structures, algorithms, and object-oriented design. Has built concurrent client-server systems, designed SQL databases with measured query optimizations, and engineered a modular framework that runs across a distributed compute cluster. Keen to own services from design through deployment and operations, write clean and maintainable code, and learn fast in a collaborative team.

RESEARCH EXPERIENCE

Multithreaded Client-Server Game (Networking)

Built a real-time multiplayer game as a Python client-server system over TCP/UDP, handling each connected player on its own thread and coordinating shared state with locks, events, and barriers. Engineered defensive handling of disconnects, timeouts, and race conditions.

Wikipedia Search Engine (Algorithms & Data Structures)

Built a search engine over a full Wikipedia dump using an inverted index, BM25 ranking, and PageRank. Precomputed per-posting scores to cut query-time cost and measured the latency-versus-relevance trade-off across index configurations.

SQL Data Applications (Databases)

Designed relational schemas and indexes for a 1.8M-row dataset and proved a 50-80× query speedup with EXPLAIN QUERY PLAN. Built and deployed four interactive SQL/Streamlit apps, one on the PonyORM object-relational mapper combined with a live REST API.

Time-Series Forecasting Benchmark (Master's Research)

Built a modular framework comparing 30+ forecasting models with a model registry, a CLI experiment runner, and parallel jobs across a distributed compute cluster. Extended it with a discrete-event simulator that schedules network packets from probabilistic forecasts.

EXPERIENCE

CyberBGU - AI Integration Research

2024-now

Partnered with RAD to integrate AI-driven optimization into Industrial Control Systems (ICS), targeting network load efficiency and operational performance.

Samsung - Technical Support

2020

Diagnosed and resolved technical issues under time pressure and communicated solutions clearly to customers.

MILITARY SERVICE

Israeli Air Force - F-16 Aeronautics Technician (Sergeant Major)

Diagnosed mechanical and electronic faults in real-time, safety-critical systems.

VOLUNTEERING

PERACH mentoring | Special-needs youth support | Holocaust survivor visits
