TECHNICAL SKILLS

Machine Learning

Python, PyTorch, scikit-learn, time-series modeling, anomaly detection (autoencoders), recommendation systems, TensorFlow, Hugging Face Transformers, feature engineering

Software & Data

SQL/SQLite, schema & index design, Docker, Linux, Slurm/cluster workflows, data preprocessing, model evaluation, experiment design

Programming

Python, SQL, Java, R

Tools

Git, VS Code, Jupyter, Colab, TensorBoard, Streamlit

LANGUAGES

English: Fluent

Hebrew: Fluent

French: Native

EDUCATION

M.Sc. Data Science

Ben-Gurion University
Meitar Excellence Program
Graduated

B.Sc. Data Engineering

Ben-Gurion University
Completed
Data Structures (97), Computational Models (99)

PROFESSIONAL SUMMARY

Data Science M.Sc. graduate with hands-on machine learning research across time-series forecasting, anomaly detection, and recommendation systems. Builds reproducible experiment pipelines in Python and PyTorch, from data preprocessing through model evaluation, and turns research results into clear findings. Backed by a Data Engineering B.Sc. for practical database and software skills.

RESEARCH EXPERIENCE

Time-Series Forecasting Benchmark (Master's Research)

Built a modular framework comparing 30+ forecasting models, statistical, deep-learning, and foundation models, with a model registry, CLI experiment runner, and parallel SLURM jobs. Extended it with a discrete-event simulator that schedules network packets from probabilistic forecasts.

Anomaly Detection in Multi-Sensor Time Series

Designed autoencoder reconstruction models for anomaly detection on multi-sensor data. Built the full pipeline: preprocessing, sensor alignment, thresholding, and evaluation.

Recommendation Systems Research (Deezer Paper Extension)

Reproduced and extended sequential recommendation models from a Deezer paper. Improved the embedding layer and added structured ranking-metric evaluation.

Tweet Device Classification (NLP)

Engineered temporal, stylometric, and TF-IDF features and benchmarked five model families, including a fine-tuned DistilBERT, under 5-fold stratified cross-validation with grid search. Best F1: 0.862.

EXPERIENCE

CyberBGU - AI Integration Research

2024-now
Partnered with RAD to integrate AI-driven optimization into Industrial Control Systems (ICS), targeting network load efficiency and operational performance.

Samsung - Technical Support

2020
Diagnosed and resolved technical issues under time pressure and communicated solutions clearly to customers.

MILITARY SERVICE

Israeli Air Force - F-16 Aeronautics Technician (Sergeant Major)

Diagnosed mechanical and electronic faults in real-time, safety-critical systems.

VOLUNTEERING

PERACH mentoring | Special-needs youth support | Holocaust survivor visits
